

# You're looking at a complete 129-step interlocking test.

## In progress.

### Introducing the new **InterTest® Automated Interlocking Test System**

The future of testing railway interlockings has arrived – and it's a beautiful sight to behold. With Ultra-Tech Enterprises' new InterTest® Automated Interlocking Test System, a more accurate, thorough, consistent and cost-effective way to test interlockings is here.

InterTest® incorporates special tools to create a detailed model of interlockings and their associated wayside signal locations. It then automatically generates test scripts and completely automates the performance of both in-service and two-year interlocking tests – measuring the state of every object in the interlocking test limits, every step of the way.
